TEMPERATURE LIMITS				
	Ambient	Process	Storage	
Dry	-20/200°F	-20/250°F	-40/250°F	
	(-29/93°C)	(-29/121°C)	(-40/121°C)	
LF	20/150°F	20/200°F	0/150°F	
(glycerin)	(7/66°C)	(7/93°C)	(-18/66°C)	

Note: Other than discoloration of the dial and hardening of the gasketing that may occur as ambient or process temperatures exceeds 150°F, non-liquid-filled gauges with standard glass windows, can withstand continuous operating temperatures up to 250°F (121°C). Liquid-filled gauges can withstand 200°F (93°C) but glycerin fill and acrylic window will tend to yellow. Accuracy at temperatures above or below the reference ambient temperatures of 68°F (20°C) will be affected by approximately. 4% per 25°F (4°C). Gauges with welded joints will withstand 750°F (450°F (232°C) with silver brazed joints) for short times without rupture, although other parts of the gauge will be destroyed and calibration will be lost. For continuous use and for process or ambient temperatures above 250°F (121°C), a diaphragm seal or capillary or siphon is recommended.
