## **Manual Printing History**

The manual's printing date and part number indicate its current edition. The printing date changes when a new edition is printed. (Minor corrections and updates that are incorporated at reprint do not cause the date to change.) The manual part number changes when extensive technical changes are incorporated.

April 1999 Edition 1 (part number: 42941-90000)
September 1999 Edition 2 (part number: 42941-90010)
December 1999 Edition 3 (part number: 42941-90010)
March 2015 Edition 4 (part number: 42941-90010)

## **Safety Summary**

The following general safety precautions must be observed during all phases of operation, service, and repair of this instrument. Failure to comply with these precautions or with specific WARNINGS elsewhere in this manual may impair the protection provided by the equipment. In addition it violates safety standards of design, manufacture, and intended use of the instrument.

Keysight Technologies assumes no liability for the customer's failure to comply with these requirements.

NOTE

42941A comply with INSTALLATION CATEGORY I and POLLUTION DEGREE 2 in IEC 1010-1. 42941A are INDOOR USE product.

DO NOT Operate In An Explosive Atmosphere

Do not operate the instrument in the presence of flammable gasses or fumes. Operation of any electrical instrument in such an environment constitutes a definite safety hazard.

Keep Away From Live Circuits

Operating personnel must not remove instrument covers. Component replacement and internal adjustments must be made by qualified maintenance personnel. Do not replace components with the power cable connected. Under certain conditions, dangerous voltages may exist even with the power cable removed. To avoid injuries, always disconnect power and discharge circuits before touching them.

• DO NOT Service Or Adjust Alone

Do not attempt internal service or adjustment unless another person, capable of rendering first aid and resuscitation, is present.

DO NOT Substitute Parts Or Modify Instrument

Because of the danger of introducing additional hazards, do not install substitute parts or perform unauthorized modifications to the instrument. Return the instrument to a Keysight Technologies Sales and Service Office for service and repair to ensure that safety features are maintained.

Dangerous Procedure Warnings

Warnings, such as the example below, precede potentially dangerous procedures throughout this manual. Instructions contained in the warnings must be followed.

WARNING

Dangerous voltages, capable of causing death, are presenting this instrument. Use extreme caution when handling, testing, and adjusting this instrument.

### Certification

Keysight Technologies certifies that this product met its published specifications at the time of shipment from the factory. Keysight Technologies further certifies that its calibration measurements are traceable to the United States National Institute of Standards and Technology, to the extent allowed by the Institution's calibration facility, or to the calibration facilities of other International Standards Organization members.

## Warranty

This Keysight Technologies instrument product is warranted against defects in material and workmanship for a period corresponding to the individual warranty periods of its component products. Instruments are warranted for a period of one year. Fixtures and adapters are warranted for a period of 90 days. During the warranty period, Keysight Technologies will, at its option, either repair or replace products that prove to be defective.

For warranty service or repair, this product must be returned to a service facility designated by Keysight Technologies. Buyer shall prepay shipping charges to Keysight Technologies and Keysight Technologies shall pay shipping charges to return the product to Buyer. However, Buyer shall pay all shipping charges, duties, and taxes for products returned to Keysight Technologies from another country.

Keysight Technologies warrants that its software and firmware designated by Keysight Technologies for use with an instrument will execute its programming instruction when property installed on that instrument. Keysight Technologies does not warrant that the operation of the instrument, or software, or firmware will be uninterrupted or error free.

## **Limitation Of Warranty**

The foregoing warranty shall not apply to defects resulting from improper or inadequate maintenance by Buyer, Buyer-supplied software or interfacing, unauthorized modification or misuse, operation outside the environmental specifications for the product, or improper site preparation or maintenance.

#### **IMPORTANT**

No other warranty is expressed or implied. Keysight Technologies specifically disclaims the implied warranties of merchantability and fitness for a particular purpose.

## **Exclusive Remedies**

The remedies provided herein are buyer's sole and exclusive remedies. Keysight Technologies shall not be liable for any direct, indirect, special, incidental, or consequential damages, whether based on contract, tort, or any other legal theory.

#### **Assistance**

Product maintenance agreements and other customer assistance agreements are available for Keysight Technologies products.

For any assistance, contact your nearest Keysight Technologies Sales and Service Office. Addresses are provided at the back of this manual.

## **Safety Symbol**

General definitions of safety symbols used on the instrument or in manuals are listed below.

 $\triangle$ 

Instruction Manual symbol: the product is marked with this symbol when it is necessary for the user to refer to the instrument manual.

Alternating current.

=== Direct current.

On (Supply).

Off (Supply).

In position of push-button switch.

Out position of push-button switch.

 $\downarrow$ 

Frame (or chassis) terminal. A connection to the frame (chassis) of the equipment which normally include all exposed metal structure.

## WARNING

This warning sign denotes a hazard. It calls attention to a procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in injury or death to personnel.

#### **CAUTION**

This Caution sign denotes a hazard. It calls attention to a procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of part or all of the product.

#### NOTE

Note denotes important information. It calls attention to a procedure, practice, condition or the like, which is essential to highlight.

## 1 Installation Guide

## **Incoming Inspection**

Inspect the shipping container for damage. If the shipping container or cushioning material is damaged, it should be kept until the contents of the shipment have been checked for completeness and the 42941A has been checked mechanically and electrically. The shipment should contain everything listed in Table 1-1. If the contents are incomplete or if there is mechanical damage or defect, notify the nearest Keysight Technologies office. If the shipping container is damaged or the cushioning material shows signs of unusual stress, notify the carrier as well as the Keysight Technologies office. Keep the shipping materials for the carrier's inspection.

#### Table 1-1 Contents

Description	Keysight Part Number	Qty.
Probe and Four-terminal Pair Connection Block	-	1
Pin Probe	42941-60002	1
Spare Pin Set (includes 3 spare pins)	42941-60004	1
3.5-mm Short <sup>a</sup>	1250-2840	1
3.5-mm Load <sup>a</sup>	0955-1105	1
Operation and Service Manual	42941-90010	1
BNC Adapter	1250-1787	1
Clip Lead	8121-0003	1
Ground Lead	04193-61629	1
Carrying Case	42941-60011	1

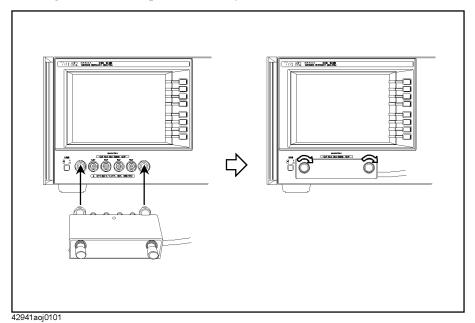

a. Not furnished with Option 001.

## Connecting the 42941A

Follow the steps below to connect the 42941A to the Impedance Analyzer.

- **Step 1.** Join the 42941A four-terminal pair connection block to the test connectors on the front panel of the Impedance Analyzer by gently matching the four BNC connectors and securing screws of the block with the test connectors and accessory mounting holes of the instrument until they come into complete contact.
- **Step 2.** Turn the block's two fastening screws clockwise at the same time until the four-terminal pair connection block is secured firmly to the instrument.

Figure 1-1 Connecting 42941A to Impedance Analyzer

Chapter 1 11

## **Serial Number**

Keysight Technologies uses a two-part, ten-character serial number that is stamped on the serial number plate (Figure 1-2) attached to the bottom of the four-terminal pair connection block. The first four letters and one digit are the serial prefix and the last five digits are the suffix.

#### Figure 1-2 Serial Number Plate

Overview

## **Product Overview**

The 42941A is the impedance probe kit designed for the Impedance Analyzer. When used with the Impedance Analyzer, this kit allows impedance measurement and analysis in a wide frequency range of up to 110 MHz. Its 1.5-meter cable for probing allows you to evaluate implemented circuits and mounted devices.

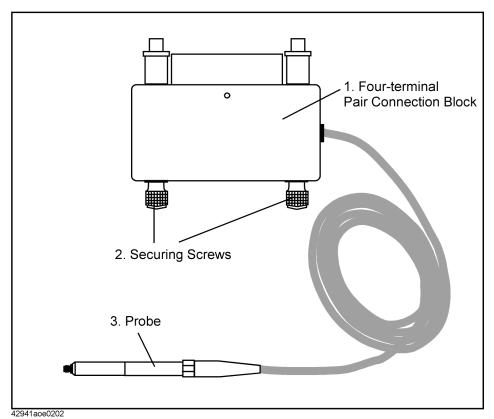

#### Figure 2-1 Product Overview

## **Functions**

Figure 2-2 and Figure 2-3 show the names of the 42941A's parts and probe adapters, respectively.

Figure 2-2 42941A Parts

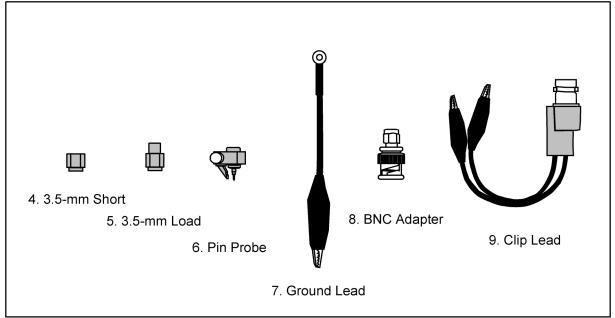

#### Table 2-1 42941A Function

No.	NAME	FUNCTION
1	Four-terminal Pair Connection Block	Connects the 42941A to the Impedance Analyzer
2	Securing Screws	Secures the 42941A to the Impedance Analyzer.
3	Probe	Attaches to various probe adapters for measurement.

Chapter 2 15

## **Functions**

Figure 2-3 Probe Adapters

42941aoe0203

Table 2-2 Probe Adapters

No.	NAME	FUNCTION
4	3.5-mm Short	A short device used for the adapter setup.
5	3.5-mm Load	A load device (50 $\Omega$ ) used for the adapter setup.
6	Pin Probe	Attached to the probe to measure implemented circuits, mounted devices, and printed circuit patterns.
7	Ground Lead	Attached to the pin probe to connect to the GND of the DUT.
8	BNC Adapter	Attached to the probe to measure devices and cables that have BNC connectors.
9	Clip Lead	Attached to the top of the BNC adapter by the probe to measure mounted lead components or large devices.

## 3 Operation

This chapter describes the proper methods for setting up the Impedance Analyzer, connecting the probe adapter, fixture compensation with the 42941A, and DUT measurement.

## **Impedance Analyzer Setup**

Before beginning measurements, you should perform the adapter setup to extend the calibration plane from the surface of the four-pair terminal to the tip of the probe. Also refer to the operation manual of the Impedance Analyzer for more information on the adapter setting.

#### **NOTE**

For adapter setup, use the furnished short and load devices.

#### **CAUTION**

When handling the 42941A, care must be taken not to give it any mechanical shock, which may cause damage to the fixture. Never give any mechanical shock to the probe.

#### **Adapter Setup**

Connect the 42941A to the Impedance Analyzer as shown in Figure 1-1 and perform the adapter setup described below.

- 1. More than 30 minutes warm-up time is required after turning on the Impedance Analyzer.
- 2. Press [Cal] key to bring up the Calibration Menu.
- 3. Press **ADAPTER []** key to bring up the Adapter Setup Menu. [] should indicate current settings.
- 4. Select **PROBE 42941A**. When selected, the softkey label will be underlined.
- 5. Press **SETUP** key to bring up the Adapter Setup Menu.
- 6. Leave the 3.5-mm port of the 42941A open (no connection). There is no OPEN standard for the 42941A.
- 7. Press **PHASE COMP** [-] key to start the phase compensation data measurement. About 1 minute later, phase compensation data measurement is completed and the softkey label changes to **PHASE COMP** [DONE].
- 8. With nothing connected to the 3.5-mm port, press **OPEN [-]** key to start open data measurement. When the open data measurement is completed, the softkey label changes to **OPEN [DONE]**.
- 9. Connect the SHORT to the 3.5-mm port.
- 10. Press **SHORT** [-] key to start the short data measurement. When the short data measurement is completed, the softkey label changes to **SHORT** [DONE].
- 11. Remove the SHORT from the 3.5-mm port of the 42941A. Then connect the LOAD to the 3.5-mm port.
- 12. Press **LOAD** [-] key to start the load data measurement. When the load data measurement is completed, the softkey label changes to **LOAD** [DONE].
- 13. Press done key.

## **Connecting Probe Adapter**

Probe adapters are furnished with the 42941A to measure DUTs of various shapes and characteristics. Attach the appropriate probe adapter for your DUT.

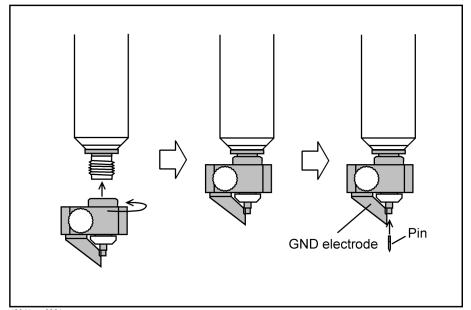

## **Connecting Pin Probe**

Attach the pin probe to the 3.5-mm connector top of the probe and insert the pin.

#### **WARNING**

The pin is sharp and potentially hazardous to personnel. When using or changing, handle the pin probe with care to prevent injury.

Figure 3-1 Connecting Pin Probe

42941aoe0301

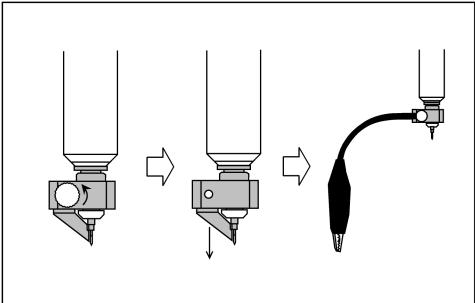

Chapter 3 19

## **Connecting Probe Adapter**

## **Connecting Ground Lead**

Remove the screw fixing the ground contact to detach the contact. Use the removed screw to attach the ground lead to the pin probe.

Figure 3-2 Connecting Ground Lead

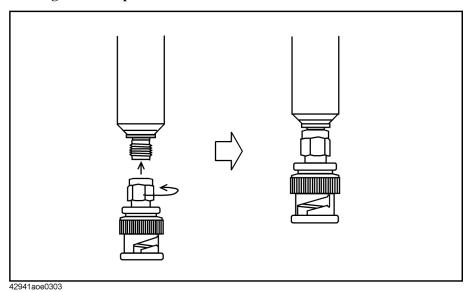

42941aoe0302

## **Connecting BNC Adapter**

Attach the BNC adapter to the 3.5-mm connector on top of the probe.

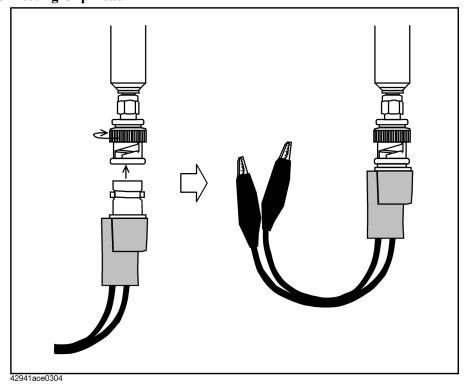

Figure 3-3 Connecting BNC Adapter

### **Connecting Clip Lead**

Attach the BNC adapter to the probe and then attach the clip lead to the adapter.

Figure 3-4 Connecting Clip Lead

Chapter 3 21

## **Fixture Compensation**

In an actual measurement, a probe adapter is attached to the probe. Fixture compensation is required for compensating residual impedance and admittance. The fixture compensation includes OPEN and SHORT compensation measurements. For more information on fixture compensation, also refer to the Impedance Analyzer Operation Manual.

#### **NOTE**

Generally, there is no need to perform load compensation. However, if you have a suitable standard device and require extremely accurate measurement, perform load compensation as needed.

The following procedure is for measurement of the compensation data with the 42941A.

#### **Performing Fixture Compensation**

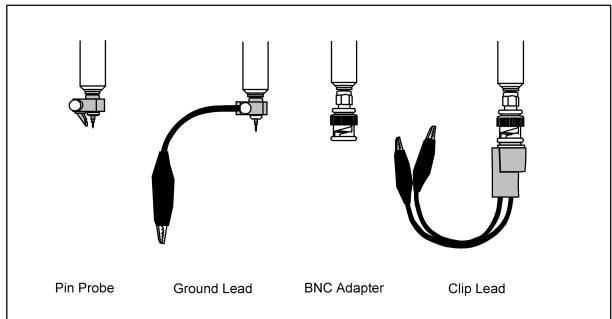

Attach the probe adapter to be used for your measurement and perform fixture compensation.

- 1. Press **[Cal]** key to bring up the Calibration Menu.
- 2. Press **FIXTURE COMPEN** key to bring up the Fixture Compensation Menu.

### **Performing Open Compensation**

1. Attach the probe adapter to the probe but leave it disconnected from a device.

Figure 3-5 Performing Open Compensation

42941aoe0305

2. Press **OPEN** key to start the OPEN compensation data measurement. When the OPEN compensation data measurement is completed, the softkey label **OPEN on OFF** (if it is off) changes to **OPEN ON off**.

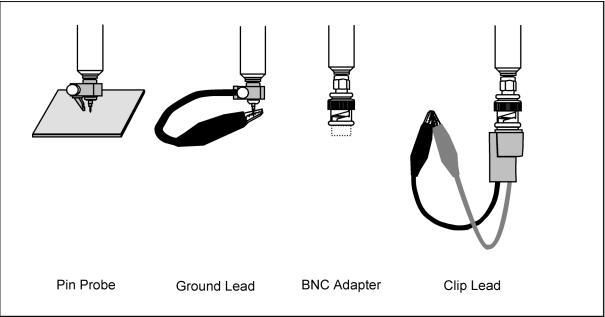

#### **Performing Short Compensation**

1. Put the probe adapter into the SHORTed state as shown in Figure 3-6. Use an appropriate device for shorting since no short device is supplied with the BNC adapter.

#### **NOTE**

For short compensation, we recommend using a short device with gold-plated surfaces, which provide stable contact resistance.

Figure 3-6 Performing Short Compensation

42941aoe0306

 Press SHORT key to start the SHORT compensation data measurement. When the SHORT compensation data measurement is completed, the softkey label SHORT on OFF (if it is off) changes to SHORT ON off.

Chapter 3 23

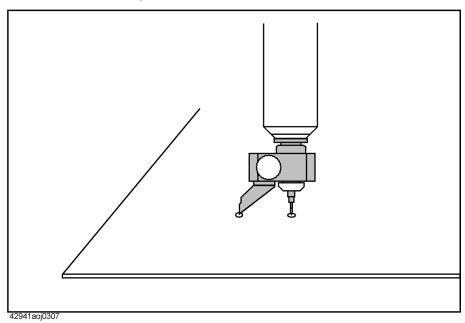

#### **DUT Measurement**

Before performing DUT measurement, open and short compensation should be done as described in the previous sections.

### **DUT Measurement Using Pin Probe**

When measuring implemented circuits, mounted devices, and printed circuit patterns, use the pin probe.

Figure 3-7 DUT Measurement Using Pin Probe

NOTE

The pin of the pin probe is replaceable. Replace it when damaged or dirty.

#### Adjusting Pin-to-GND Gap

The gap between the pin and the GND contact is adjustable for DUT, ranging from 0.5 mm to 13.5 mm. To adjust the gap, release the screw fastening the GND contact and then rotate the contact (Figure 3-8).

#### **CAUTION**

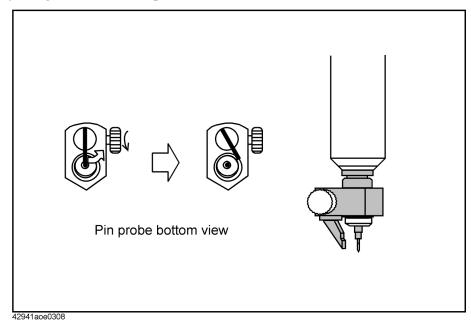

The probe is grounded 25  $\Omega$  (nominally). Do not connect the probe directly to the circuit with a DC output. If you connect a circuit with a DC output, resulting in as follows.

It may cause the probe to be damaged.

It may influence the circuit to not perform correctly or may damage it entirely. Measurement value will be incorrect.

In the case of measuring a circuit that could output a DC signal, connect an

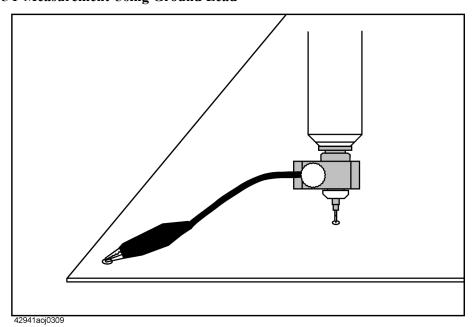

Figure 3-8 Adjusting Pin-to-GND Gap

#### **DUT Measurement Using Ground Lead**

Use the ground lead to ground the probe to a distant point(Figure 3-9). When you attach the ground lead to the pin probe, detach the ground contact (refer to Figure 3-2).

Figure 3-9 DUT Measurement Using Ground Lead

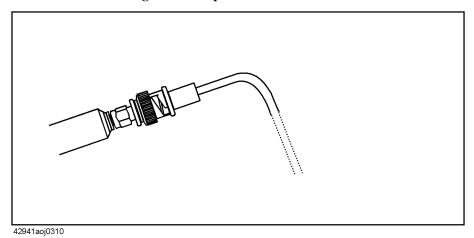

Chapter 3 25

#### **DUT Measurement**

## **DUT Measurement Using BNC Adapter**

The BNC adapter is used to measure I/O terminals or cables that have BNC connectors. It is also used as a mounting base for the alligator lead.

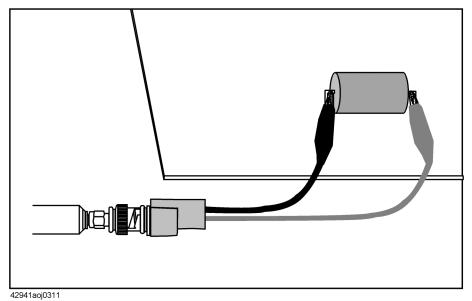

Figure 3-10 DUT Measurement Using BNC Adapter

#### **DUT Measurement Using Clip Lead**

Use the clip lead to measure devices with leads that are large or mounted on the circuit board.

Figure 3-11 DUT Measurement Using Clip Lead

## 4 Specifications

This chapter provides specifications of the 42941A test fixture.

## **Specifications**

ments	Impedance Analyzer		
	40 Hz to 110 MHz		
e	± 42 V peak max. (AC+DC)		
e	25 Ω (Nominal) DC coupled		
temp.	-20°C to +75°C (except four-terminal pair connection block) 0°C to +55°C (four-terminal pair connection block)		
humidity	15% to 95%RH ( @ wet bulb temp. < 40°C)		
temp.	-40°C to +70°C		
humidity	≤ 90 % RH ( @ wet bulb temp. <65°C)		
	$350 \text{ (W)} \times 100 \text{ (H)} \times 280 \text{ (D)} \text{ mm (Includes carrying case)}$		
	2400g (Four-terminal pair connection block 1000g)

	e temp.		

For more information on impedance measurement accuracy at the 3.5-mm port and additional error factor, refer to the Impedance Analyzer Operation Manual.

## 5 Service

This chapter provides information on servicing and proper maintenance.

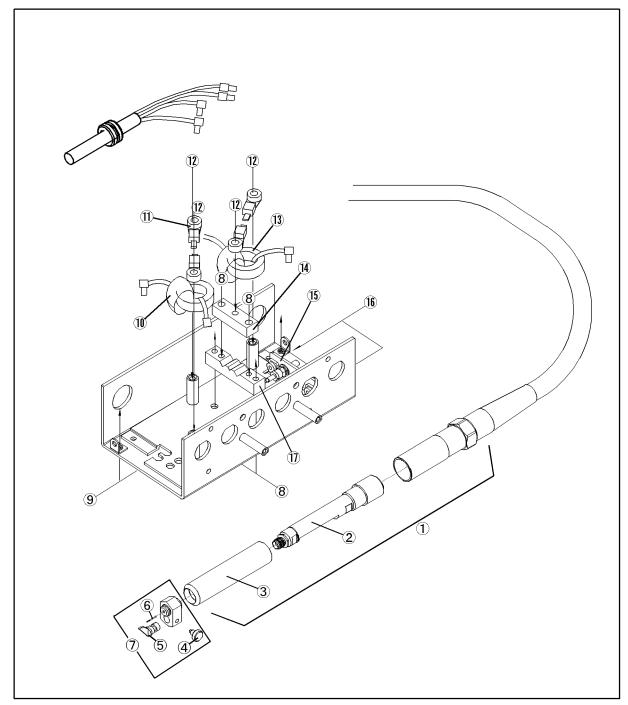

## Maintenance

An exploded view of the 42941A for parts identification is shown in Figure 5-1 and Figure 5-2. Do not disassemble any further than shown. Maintenance consists principally of cleaning contacts and replacing worn or damaged parts. Take special care when cleaning contacts.

To order parts, use the Keysight Technologies part numbers listed in Table 5-1 and Table 5-2. If a faulty part is located in an assembly that cannot be disassembled, order the next higher assembly or return the fixture to the nearest Keysight Technologies Sales/Service Office for repair or replacement.
