# Connect Unit to WiFi network via Mobile device ❼

Using a WiFi enabled device (smart phone, tablet, etc.), find **CC65XX-XXXX** in available networks.

XXXX will be last 4 digits of unit's S/N# (on back of unit).

Open Web Browser on your MOBILE DEVICE ❽

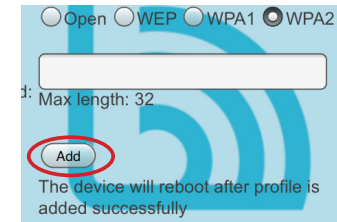

Enter into web browser: **192.168.1.1**

Select desired local network to which the device will be connected, and enter password for network.

The most common network is **WPA2.**

Press Add/Confirm device restart ❾

Click Add

Unit will reboot, connect to WiFi, and begin posting data.

Note: Upon successful connection, you will receive an error message in your browser (Example: Safari cannot open the page because the network connection was lost.), and device reboot may take up to 1 minute, mobile will exit WiFi.

Note: The WiFi symbol will flash on device display until the device posts data successfully.

Note: ALLOW UP TO 30 MINS FOR DEVICE DATA TO UPDATE AND START TRANSMITTING DATA.

If and ERR message occurs on device, press acknowledge button (✓) and repeat steps 4-7.

Log-in to TraceableLIVE account to manage device settings, alarms, users, and payment options.

Device and account setup is now complete.
