▶ Design Features

Low ripple and noise
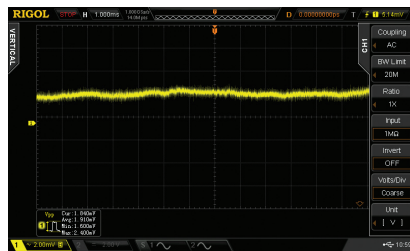

With extremely low noise, the product can satisfy your demands for highly pure power.

Excellent line regulation rate and load regulation rate: 0.01%

Excellent line regulation rate and load regulation rate ensure the output stability and safety.

Powerful timing output function
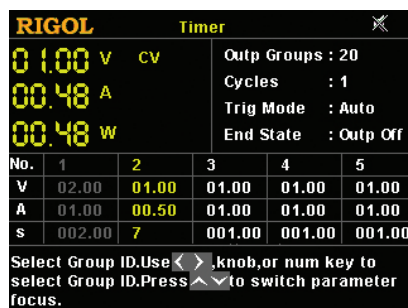

When the timing output is enabled, the system will configure the voltage, current, and the duration time based on the preset timer parameters, so as to provide varied voltage and/or current output for the load.

Easy-to-use function of file storage and recalling

It supports storing and recalling state files and timer files, and allows you to restore the instrument settings to defaults.

Fast transient response time

The transient response time is less than 50 µs. When the transient change occurs to the load current, the output voltage can be quickly restored to the set value, ensuring the output quality.

## Sound overvoltage/overcurrent protection (OVP/OCP)

You can set thresholds for OVP and OCP values. If overvoltage or overcurrent occurs, the power supply shuts down the output automatically, and then a prompt message is displayed.
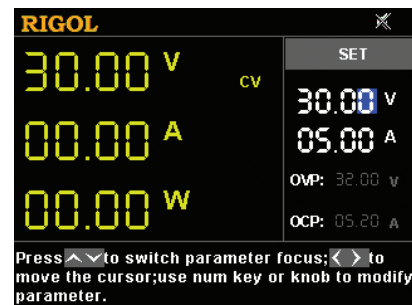

Convenient trigger function

When multiple power supplies are in serial or parallel connection, enabling the external trigger function can realize the synchronous output for multiple power supplies.

Clear and intuitive user interface, easy to operate

You can clearly view the status of the instrument from its intuitive user interface. The help information is displayed in real time at the bottom of the interface, convenient for you to operate.
